- ▶ New stud without compromise
- ▶ Excellent snow performance
- ▶ Improved dry performance

MP30 Sibir Ice 2

For compact-class and middle-class vehicles and SUVs

Technical Highlights

New stud without compromise

Matador's new developed aluminum Envi stud with a multi flange area provides a significantly higher grip force in the block. This results in enhanced braking behavior and an optimum stud grip on ice.

Excellent snow performance

The snow pockets in combination with mini snow pockets have been optimised to be able to accommodate larger amounts of snow. This interaction with snow results in excellent snow traction.

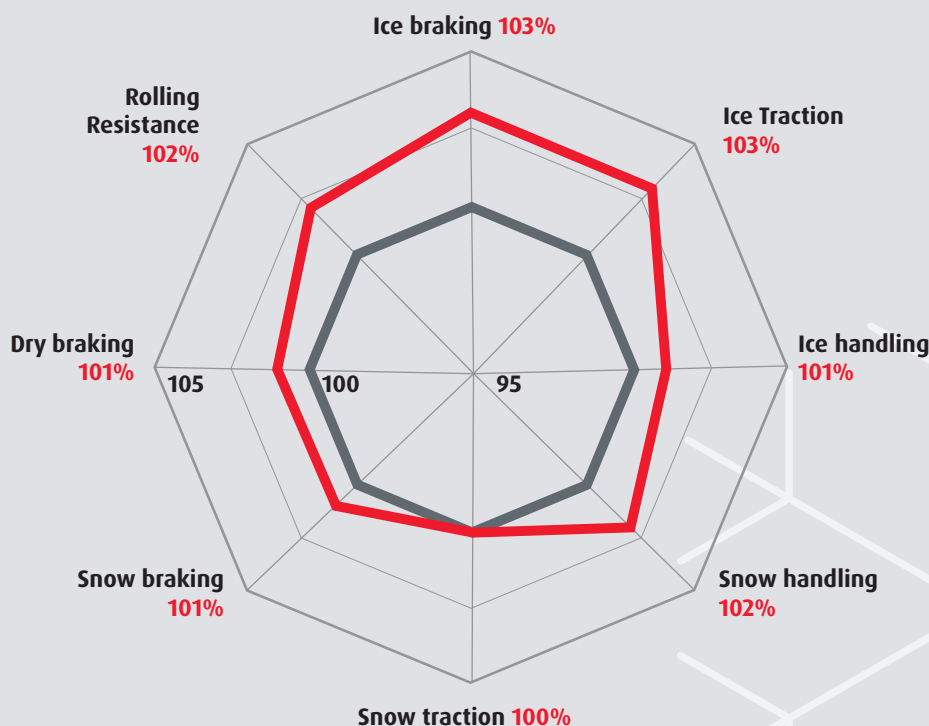

Improved dry performance

The large and stable block ensures increase of lateral stiffness and force transmission. This leads to enhanced cornering stability and dry handling performance.
